Details

Focus: Compare the instance-based learning to a model-based learning.

Example:

Suppose you want to know if money makes people happy, so you download the Better Life Index data from the [OECD's website](https://www.oecdbetterlifeindex.org/) , and [World Bank stats](https://ourworldindata.org/)  [\(https://ourworldindata.org/\)](https://ourworldindata.org/) about gross domestic product (GDP) per capita. Then you join the tables and sort by GDP per capita.

Notebook Setup

1. Open a **new Jupyter Notebook**
2. Name it: `activity-2.ipynb`
3. Follow the instructor's code in class.

Submission:

Submit your notebook here.

- *You are advised to start a new github repo for this course and push all your notebook there.*
- *Remember to give me access: My username is DialaE.*
